

Raw CSI data.

Raw CSI data collected for Experiment 2 is located in `..\realdata\input_data\30ms\csidata` folder. There is data for 6 activities such as: Walk, Fall, Sit, Sit-down, Stand and Stand-up. In the folder `..\realdata\input_data\30ms\csidata\validation` validation data can be found.

Matlab code

In the folder `..\matlab code` the source code can be found. To start the Experiment 2 classification run the file named “RNN_LSTM_training.mat”. In this file first the training and validation data is prepared by reading out from .pcap files, extracting CSI amplitude values and setting the labels for each activity from the name of the file. Important is that the path for these data should be set correctly.

Results

In the folder **Results** confusion matrices for Experiment 2, activity plots and LSTM Network plots can be found.
