

Weekly AI Summary

Family-friendly overview for Mrs. Lakshmi Rao

Day 4 of Monitoring · Report window: June 12–14

THIS WEEK AT A GLANCE

Two possible falls were detected on June 14 — please check in with Mom.

Open this report if you want a fast answer: the first two days were steady with normal sleep and no safety events. On June 14, the system flagged **two possible fall events** and a night of disrupted sleep. Confidence on both fall events is high; we recommend confirming with Mom directly.

Sleep this week

Average sleep duration, average quality score, and nights below baseline

AVERAGE DURATION

6.4 hours

AVERAGE QUALITY

71 / 100

NIGHTS BELOW BASELINE

1

June 12–13 were steady, aligned with Mom's 7.3-hour baseline. On June 14, average duration dropped to 5.6h and quality fell to 52/100 — correlated with the two fall events that day. Average over the 3-day window is 6.4 hours (down from a 7.3-hour baseline over the first two days).

JUN 12

7.4h

82/100

Steady, consistent with baseline

JUN 13

7.2h

80/100

Steady, consistent with baseline

JUN 14

5.6h

52/100

Disrupted — 2 fall events

Attribution quality

How much of the data was confidently tied to Mom specifically

High-Confidence Attribution to Mom

24% of the monitoring window had ambiguous or shared household activity — data from those periods was excluded from Mom's profile.

Fall Events — June 14

Possible fall detections flagged by the system on June 14

Two possible fall events were detected on June 14.

Two events on the same day may indicate reduced stability rather than two unrelated incidents — worth discussing with Mom or her physician.

Jun 14 · 14:32

HIGH CONFIDENCE · 91%

Brief event — normal movement resumed within 3 minutes.

Confidence 91%

Family notified Telegram · Immediate

Jun 14 · 19:47

HIGH CONFIDENCE · 87%

Extended low-activity period (~40 min) followed event.

Confidence 87%

Family notified Telegram · Immediate

RECOMMENDED ACTION

Two high-confidence fall events on the same day may signal reduced stability. We recommend speaking with Mom directly and considering a physician check-in. If incidents recur, escalating to a physiotherapy assessment is advisable.

Safety events

Falls, prolonged inactivity, and apnea events · ELEVATED

2 possible fall events detected on June 14. Both events triggered immediate Telegram notifications. No apnea events were logged during this 3-day window. An extended low-activity period (~40 min) was observed after the second fall on June 14 at 19:47.

Date / Time	Event	Detail	Alert Sent	Acknowledged
Jun 14 · 14:32	Possible fall	Brief event, normal movement resumed within 3 min. Confidence 91%.	Sent	Acknowledged
Jun 14 · 19:47	Possible fall	Extended low-activity period (~40 min) followed event. Confidence 87%.	Sent	Acknowledged
Jun 12–13	No events	No safety events on either of the first two days.	N/A	N/A

Routine regularity

Morning, afternoon, evening, and night pattern consistency

	Jun 12	Jun 13	Jun 14
Morning	Regular	Regular	Irregular
Afternoon	Regular	Regular	Irregular
Evening	Regular	Regular	Irregular
Night	Regular	Regular	Irregular

June 12 and 13 showed consistent routine regularity across all time-of-day windows. June 14 shows a significant disruption across all periods, correlated with the two fall events that day.

Day-by-day breakdown

Sleep quality, fall events, and key notes per day

Date	Sleep Quality	Fall Events	Notes
June 12	82 / 100	0	Normal day, consistent with baseline
June 13	80 / 100	0	Normal day, consistent with baseline
June 14	52 / 100	2	Elevated attention — see fall events above
